Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

Burndown Chart:

The Burndown Chart represents remaining story points versus time. Each sprint starts with 20 story points. Points reduce daily as tasks are completed, reaching zero by the sprint end date.
